Discovery of the Future of Cooking

Rickul's story began with a determined pursuit of excellence in the electric flame industry. After identifying a gap in the market for efficient and environmentally friendly cooking solutions, we embarked on a mission to create the world's first electric flame stove with our associates "Huahuo". This venture was fueled by years of dedication, research, and collaboration with international experts, leading to groundbreaking advances in electric flame technology. Our products have transformed cooking experiences for countless users, emphasizing safety and sustainability. We are committed to supporting our clients in adopting modern, eco-friendly solutions that contribute to a greener future.
